

PROFESSIONAL HOTKNIFE

COUTEAU CHAUD PROFESSIONNEL

CUCHILLO PROFESSIONAL de CALOR

General Instructions and Preparation:

- The Professional HotKnife works best when used with a tempered glass mat. It will ensure that your work area will not be damaged from heat or cuts.
- Use masking tape to secure the Stand to a protected work surface. Carefully attach the Knife Point and tighten with pliers. Plug Tool in and turn switch "on". It will take 4 - 5 minutes for the Tool to heat.
- Always exercise caution when using the Knife Point. Do not touch any metal parts when the tool is plugged in. It's hot!
- If residue remains on the knife blade when finished, wipe off on a soft cloth. Make sure to turn the switch "off" and let the Tool completely cool before putting away.
